Preface

A recent graduate from NTI Gymnasiet Karlstad, holding an equivalent of an Associate's degree, I bring a hands-on experience in system administration as well as both front-end and back-end development within open-source environments, utilizing **Vim/NeoVim** and **GNU/Linux**, primarily **NixOS**.

My primary expertise lies in designing and implementing concurrent systems, with a strong focus on asynchronous programming. I'm highly proficient in synchronous programming as well, leveraging languages like **Rust**, and **C. Bash** particularly for automation and build scripting.

Additionally, I have experience working with **JavaScript**, **Java**, and **Python**, and I possess a quick aptitude for learning new languages. With minimal time to familiarize myself with new syntax and language features, I can learn languages such as **Zig**, **Go**, **C++** and other **C**-like languages and supersetts.

In the DevOps space, I have practical experience with **Docker**, and **Hetzner**, making me adept at building, deploying, and managing scalable infrastructure.

And In terms of **IT Support**, I am certified in terms of configuration, installation, and management for Windows operating systems, and more than capable of all types of troubleshooting in Windows and Linux environments.

Professional Experience

Administrator & Webmaster, Goop Studios UF - Karlstad, Innovation Park Sep 2023 – Jun 2024

- Developed and deployed the company website using **Astro**, hosted domainless on pages.dev due to the company's dissolution.
- Co-founded Goop Studios as part of an entrepreneurship course, co-leading the initiative to manage and operate the company for one year.
- Spearheaded the planning and selection of tools and services to drive business operations, ensuring effective infrastructure and resource allocation.
- Website: goop-studios.pages.dev

Intern, The Great Journey – Karlstad, Innovation Park Feb 2024 – Apr 2024

- Led efforts to improve the Goop Studios' online presence and cybersecurity, managing all technical infrastructure for seamless operations.
- Contributed to content creation and development, including building the website for Goop Studios.

Projects

hamon github.com/tatsoku/hamon

- A work-in-progress shell for Linux (and soon Windows) systems, designed for performance and flexibility.
- Supports environment variable injection into processes, enhancing control over execution contexts.
- Developed in **C**, utilizing only the standard **GNU C Library (glibc)**.

toast github.com/h4rldev/toast

- A high-performance web server optimized for serving fast, efficient websites.
- Built using **libh2o** for maximum speed and flexibility in handling HTTP(S) requests.
- Capable of serving HTML content in approximately 3 milliseconds, with even faster performance when utilizing its built-in **gzip** compression.
- Fully configurable with **libjansson** and designed for easy extensibility, allowing for seamless customization and scaling.
- Developed in **C**, ensuring minimal overhead and rapid execution.

Education & Certifications

NTI Gymnasiet Karlstad – Associate's Degree in IT & Networking

2024

Certifications are listed on my old webpage for now: h4rl.dev
